Abstract

NFPA estimates that there were approximately 1,148,800 firefighters in the U.S. in 2007. Of the total number of firefighters 323,350 or 28% were career firefighters and 825,450 (72%) were volunteer firefighters. Most of the career firefighters (74%) are in communities that protect 25,000 or more people. Most of the volunteer firefighters (95%) are in departments that protect fewer than 2,500 people. There are an estimated 30,185 fire departments in the U.S. Of these, 2,263 departments are all career, 1,765 mostly career, 4,989 are mostly volunteer and 21,168 are all volunteer. In the U.S., 13,221 or 44% of departments provide EMS service, 4,472 departments or 15% provide EMS service and advance life support, while 12,492 departments or 41% provide no EMS support.

Keywords: fire departments, firefighters, career, volunteer, EMS, statistics.

Acknowledgements

The authors would like to thank all the fire departments who participated in this year's annual NFPA fire experience survey, and/or to the NFPA Fire Service Survey.

The authors would also like to thank the members of the NFPA staff who worked on the 2007 U.S. Fire Experience Survey, Frank Deeley, John Baldi and John Conlon for editing the survey form and making follow-up call to fire departments.

The U.S. Fire Department Profile Through 2007

There are **1,148,800** firefighters in the United States

- **28%** (323,350) are career firefighters.
- **72%** (825,450) are volunteer firefighters.
- Firefighters in smaller communities are more likely to be volunteers.
- Departments protecting larger communities tend to have a higher proportion of firefighters in the age groups 30-39 and 40-49 than smaller communities.

Number of Firefighters in the U. S. by Age Group, 2007

30,185 fire departments protected the United States in 2007

- All career 2,263
- Mostly career 1,765
- Mostly volunteer 4,989
- All volunteer 21,168

Fire Departments by Type, 2007

Fire Department Provision of Emergency Medical Service, 2005-2007 Annual Averages

Firefighters

There were approximately 1,148,800 firefighters in the U.S. in 2007, according to estimates based on NFPA's 2007 National Fire Experience Survey (see Table 1). This is an increase of 0.6% from a year ago, or virtually no change from a year ago.

Career firefighters include full-time (career) uniformed firefighters regardless of assignments, e.g., suppression, prevention/inspection, administrative. Career firefighters included here work for a public municipal fire department; they do not include career firefighters who work for state or federal government or in private fire brigades.

Volunteer firefighters include any active part-time (call or volunteer) firefighters. Active volunteers are defined as being involved in fire fighting. Of the total number of firefighters, 323,350 or 28% were career firefighters, while 825,450 or 72% were volunteers.¹

Most of the career firefighters (74%) are in communities that protect 25,000 or more people. Most of the volunteers (95%) are in departments that protect fewer than 25,000 people and more than half are located in the small, rural departments that protect fewer than 2,500 people (see Table 1).

Since 1986, the number of career firefighters in the U.S. has gone up quite steadily from 237,500 in 1986 to 323,350 in 2007 for an overall increase of 36% (Table 2, Figure 1). However when the rates of career firefighters per 1,000 people protected for mostly or all career departments are examined, the rates do not increase but stay in a range of 1.67 to 1.77 career firefighters per 1,000 people protected (Table 2, Figure 1). Essentially what this means is that even though the number of career firefighters has gone up, the number of people protected by career firefighters has also gone up as the population in the U.S. has increased.

¹ Note that these results are based on a sample survey, and as a result there is a confidence interval associated with each estimate. Based on data reported by fire departments responding to the 2007 National Fire Experience Survey, the NFPA is confident that the actual number of career firefighters falls within the range of 309,750 to 336,950, and the actual number of volunteer firefighters falls within the range of 808,050 to 842,850.

Table 1
Career and Volunteer Firefighters
in the U.S., by Population Protected, 2007

Population Protected	Career	Volunteer	Total
1,000,000 or more	38,350	400	38,750
500,000 to 999,999	31,800	7,200	39,000
250,000 to 499,999	23,400	3,250	26,650
100,000 to 249,999	50,700	1,950	52,650
50,000 to 99,999	46,600	6,900	53,500
25,000 to 49,999	48,650	24,400	73,050
10,000 to 24,999	50,450	84,250	134,700
5,000 to 9,999	15,700	109,400	125,100
2,500 to 4,999	8,000	162,050	170,050
Under 2,500	9,700	425,650	435,350
	323,350	825,450	1,148,800

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2007

Note the number of volunteer firefighters for communities of 25,000 or more and the number of career firefighters for communities of less than 10,000 may change considerably from year to year because of their small size and sample variability.

Table 2
Number of Firefighters in the U.S., 1986-2007

Year	Total		Career		Volunteer	
	Number	Rate per 1,000 People	Number	Rate per 1,000 People	Number	Rate per 1,000 People
1986	1,045,950	4.35	237,750	1.73	808,200	7.88
1987	1,060,000	4.36	243,200	1.73	816,800	8.05

2004	1,100,750	3.76	305,150	1.71	795,600	6.88
2005	1,136,650	3.82	313,300	1.68	823,650	7.30
2006	1,140,900	3.81	316,950	1.74	823,950	7.26
2007	1,148,800	3.81	323,350	1.74	825,450	7.29

Source: NFPA Survey of Fire Departments for U.S. Fire Experience (1986-2007).

The rates listed above are based on data reported to the NFPA, and do not reflect recommended rates or some defined fire protection standard.

Note that the rates per 1000 people protected for career firefighters are based on population protected for departments that are comprised of all or mostly career firefighters. While the rates per 1000 people protected for volunteer firefighters are based on population protected for departments that are comprised of all or mostly volunteer firefighters.

Figure 1. Number of Career Firefighters and Rate per 1,000 People

Source: NFPA Annual Survey of Fire Departments for U.S. Fire Experience (1986-2007)

Since 1986, the number of volunteer firefighters declined in the late 1980s and in early 2000s, each time returning to the same level soon after. In 2005-2007, the number of volunteer firefighters has been stable at a level slightly higher than any previously recorded. (Table 2, Figure 2). When the rates of volunteer firefighters per 1,000 people protected for mostly or all volunteer departments are examined, the rates also show no consistent trend and fall within the range of 6.93 to 8.05 per 1,000 people protected.

According to the U.S. Department of Labor, Bureau of Labor Statistics for the 2003-2007 period, there were on average 26,800 African-American career firefighters including fire inspectors or 19% of the total and 12,600 female career firefighters including fire inspectors, or 5% of the total.²

A good way to develop a sense of the size of departments relative to the population they protect is to examine the rate of firefighters per 1,000 people. Tables 3 and 4 provide the range of rates for career firefighters in departments protecting at least 25,000 people and for volunteer firefighters in departments protecting fewer than 25,000 people. **It is important to note that the rates are based on data reported to the NFPA and do not reflect recommended rates or some defined fire protection standard.**

Fire departments protecting communities of 25,000 people or more had median rates of career firefighters per 1,000 people of 1.14 to 1.36 (Table 3). However, ranges for departments by community size varied considerably within stratum and particularly for communities of 100,000 to 249,999, 50,000 to 99,999, and 25,000 to 49,999. Note that the rates for a particular size of community varied considerably, because departments face great variation in their specific circumstances and policies, including length of work week, unusual hazards, geographical

² Figures are from the *Annual Averages Tables Employment and Earnings*, Bureau of Labor Statistics, Washington, D.C. These numbers can change considerably from year to year because of their small size and sample variability.

Table 3
Career Firefighter Rates
By Population Protected, 2007

Career Firefighters Per 1,000 People			
Population Protected	Low	Median	High
1,000,000 or more	0.66	1.33	1.90
500,000 to 999,999	0.53	1.27	2.65
250,000 to 499,999	0.56	1.14	1.96
100,000 to 249,999	0.36	1.36	3.10
50,000 to 99,999	0.00	1.33	3.96
25,000 to 49,999	0.00	1.27	3.32

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2007.

The rates listed above are based on data reported to the NFPA, and do not reflect recommended rates or some defined fire protection standard.

The rates of a particular size of community may vary widely because departments face great variation in their specific circumstances and policies including length of work week, unusual structural conditions, types of service provided to the community, geographical dispersion of the community, and other factors.

Career rates are shown only for communities with populations of 25,000 or more, where departments are comprised of all career or mostly career firefighters. Also some of these departments have some volunteers, who are not reflected in these figures.

The low and high values are the lowest and highest values by size of community. The median value is chosen so that half the departments had higher values, and half had lower.

Table 4
Volunteer Firefighter Rates
By Population Protected, 2007

Population Protected	Volunteer Firefighters Per 1,000 People		
	Low	Median	High
10,000 to 24,999	0.00	1.59	13.50
5,000 to 9,999	0.00	3.88	12.86
2,500 to 4,999	1.28	7.82	22.00
Under 2,500	4.00	20.00	*

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2007.

The rates listed above are based on data reported to the NFPA, and do not reflect recommended rates or some defined fire protection standard.

The rates of a particular size of community may vary widely because departments face great variation in their specific circumstances and policies including unusual structural conditions, types of service provided to the community, geographic dispersion of the community, and other factors.

Volunteer rates are shown only for communities under 25,000, where departments are comprised of all volunteer or mostly volunteers. Also, some of these departments, particularly those with population protected of 5,000 or more, have some career firefighters, who are not reflected in these figures.

The low and high values are the lowest and the highest values by size of community. The median value is chosen so that half of the departments had higher values, and half had lower.

*Because there are a minimum number of firefighters to form even a single company, smaller communities of under 100 people can have very high rates.

dispersion of the community, and scope of services provided (e.g., whether the department handles emergency medical calls).

Fire departments protecting less than 25,000 people had median rates of volunteer firefighters per 1,000 persons in the range of 1.59 to 20.00 (Table 4). This wide range in median rates for smaller communities reflects the fact that it takes a minimum number of firefighters to staff a department regardless of community size. Also volunteer firefighters are usually available on a part-time basis only, so it takes more of them to ensure an adequate response to each alarm.

Length of work week and its effect on rate of career firefighters per 1,000 population by size of community can be seen in Table 5. Tables 6 and 7 provide median rates for career and volunteer firefighters by region and size of community.

Of the 1,148,800 firefighters, the age group accounting for the largest share of firefighters was the 30-39 group, which accounted for 324,000 or 28.2% of all firefighters (Table 8 and Figure 3). Many firefighters fell in the 20-29 age group (21.4%) and the 40-49 age group (25.9%). Firefighters age 50-59 accounted for a smaller share (15.4%), but still more than one-seventh of all firefighters. Few firefighters fell outside this combined range of 20 to 59 years old. Only 3.5% of firefighters were age 16 to 19, and another 5.5% were age 60 and over.

Age group patterns did vary somewhat by population of community protected (Table 9, Figure 3). Departments that protect less than 25,000 people, and are comprised mostly of volunteers, tended to have higher proportions of firefighters in the under 30 age group, while departments that protect 25,000 people, and are comprised mostly of career firefighters, or more had higher proportions of firefighters in the 30-39 and 40-49 age groups.

When age group patterns by year are examined for the 1998-2007 period, all age group levels are quite consistent with very slight changes over time (Figure 4).

Table 5
Career Firefighters per 1,000 People For All Career Departments
By Work Week and Population Protected, 2005-2007

Fire Departments

There are an estimated 30,185 fire departments³ in the United States. Of these, 2,263 departments or 7.5% are all career⁴; that is, they are comprised solely of career firefighters. An estimated 1,765 departments (5.8%) are mostly career, while 4,989 (16.5%) are mostly volunteer. An estimated 21,168 departments (70.1%) are all volunteer (Table 10).

Another way to put this is that 13% of all departments are all career or mostly career but protect 62% of the U.S. population, while 87% of the departments are mostly volunteer or all volunteer and protect 38% of the population (Table 10).

The number of fire departments by size of community is displayed in Table 11. Department type did vary considerably by population protected. For community sizes 25,000 and above, the percentage of departments classified as all career or mostly career ranged from 69 to 100%, while for community sizes less than 25,000, the percentage of departments classified as all volunteer or mostly volunteer ranged from 60 to 98% (Table 12).

³ A fire department is a public or private organization that provides fire prevention, fire suppression and associated emergency and non-emergency services to a jurisdiction such as a county, municipality, or organized fire district.

⁴ Department type is broken into four categories. All career departments are comprised 100% of career firefighters. Mostly career is comprised of 51 to 99% career firefighters, while mostly volunteer is comprised of 1 to 50% career firefighters. All volunteer departments are comprised 100% of volunteer firefighters.

Table 10
Number of Departments and Percent of U.S. Population Protected
By Type of Department, 2007

Type of Department	Number	Percent	Percent of U.S. Population Protected
All Career	2,263	7.5%	45.4%
Mostly Career	1,765	5.8%	16.8%
Mostly Volunteer	4,989	16.5%	17.0%
All Volunteer	21,168	70.1%	20.8%
Total	30,185	100.0%	100.0%

Source: NFPA Fire Service Inventory, and 2007 NFPA Survey of Fire Departments.

Type of department is broken into four categories. All career departments are comprised of 100% career firefighters. Mostly career is comprised of 51 to 99% career firefighters, while mostly volunteer is comprised of 1 to 50% career firefighters. All volunteer departments are comprised of 100% volunteer firefighters.

Source: NFPA Survey of Fire Departments for U.S. Fire Experience, 2007.

Type of department is broken into four categories. All career departments are comprised of 100% career firefighters. Mostly career is comprised of 51 to 99% career firefighters, while mostly volunteer is comprised of 1 to 50% career firefighters. All volunteer departments are comprised of 100% volunteer firefighters.

Fire Department Apparatus and Stations

Estimates of the number of apparatus and stations in the United States for the 2005-2007 period indicate that there were 68,050 pumpers, 6,750 aerial apparatus, 74,350 other suppression vehicles (which includes pumpers less than 1,000 gpm, hose usage, brush vehicles, tanker, etc.) and 51,950 stations. Table 13 provides a breakdown of the average apparatus and station rates by community size.

It is worth emphasizing what the rates in Table 13 really mean. The numbers reflect averages of apparatus and station rates per 1,000 people by population protected reported to the NFPA. They do *not* represent recommended rates or some defined fire protection standard.

The rates are higher for departments protecting smaller communities (under 25,000). This is because it takes a minimum number of apparatus and stations to operate a fire department regardless of the number of people protected. For instance, for a department protecting 1,000 people, you would expect according to Table 13 on the average 1.153 pumpers, 1.792 other suppression vehicles, .029 aerial apparatus, and .932 stations. The .932 stations per 1,000 people is the highest rate shown in Table 13, but for this community size it is equivalent to one station per department. Another way to put this is that for every 100 departments reporting 1,000 people, you would expect approximately 115 pumpers, 179 other suppression vehicles, 3 aerial apparatus, and 93 stations. For communities of 25,000 to 999,999, the rates tend to be quite similar: .058-.112 pumpers per 1,000 people; and .023-.065 other suppression vehicles .015-.022 aerial apparatus per 1,000 people, and .055-.096 stations per 1,000 people.

Tables 14, 15, and 16 display the frequency of occurrence of the number of pumpers, aerial apparatus, and stations by size of community.

Emergency Medical Services

The level of emergency medical service (EMS) provided by fire departments by size of community for the 2005-2007 period can be seen in Table 18. The larger the community, the more likely EMS service was provided. Overall for the country, 13,221 or 43.8% of departments provided EMS service, 4,472 departments or 14.8% provided EMS service and advanced life support, while 12,492 departments or 41.4% provided no EMS service.

U.S. Expenditures on Local Fire Protection

Table 19 shows expenditures on local fire protection by governments, with and without adjustment for inflation. Note that these expenditures adjusted for inflation, have risen 146% from 1980 to 2006. Other municipal service costs like police protection have risen in a similar manner.

Fire protection costs rose 94% from 1986 to 2006 after adjusting for inflation, while the number of career firefighters was increasing 33%. Since chiefs of fire departments serving larger communities report problems with shrinking budgets or with level budgets combined with increasing responsibilities, this clear pattern of increasing fire department resources nationwide is difficult to interpret. Some of the factors possibly contributing to this increase in costs are (1) shrinkage of the work week⁵ for some departments, which results in a need to increase staffing and apparatus or to pay firefighters at overtime rates; (2) increased EMS responsibilities requiring increased staffing and, in some communities, a more frequent replacement of apparatus; and (3) costs of retirement and health benefits continuing to rise as they do for the general population.

⁵ This is the result at least to some extent of the Fair Labor Standards Act being applied to municipal fire departments.

Table 18
Departments Providing Emergency Medical Service
By Community Size (Percent), 2005-2007

Population Protected	No EMS	EMS	EMS and ALS	Total
1,000,000 or more	0%	7%	93%	100%
500,000 to 999,999	0	30	70	100%

Data Sources

The report is based on two data sources: the annual NFPA Survey for U.S. Fire Experience, 2007, and the NFPA Fire Service Survey, 2005-2007.

The annual fire experience survey is a sample survey of fire departments in the United States, which serves as the basis for making national estimates of the fire problem. The sample is stratified by the size of the community protected by the fire department. All U.S. fire departments that protect communities of 50,000 or more are included in the sample, because they constitute a small number of departments with a large share of the total population protected. For departments that protect less than 50,000 population, a sample was selected stratified by size of community protected. Survey returns in recent years have ranged from 2,500 to 3,500 departments annually. The survey also includes questions on the number of career and volunteer firefighters. The national projections are made by weighing sample results according to the proportion of total U.S. population accounted for by communities of each size.

The NFPA Fire Service Survey is a three year cycle survey which attempts to survey about one third of the states in the country each year. The survey includes questions on the number of career firefighters, the number of volunteer firefighters, length of work week, number of apparatus and stations, etc. In recent years the survey has had a response rate of about 23% from departments.
